1. Claims 1-28 are pending in this application.
2. The nonstatutory double patenting rejections of some or all of claims 1-28 have been maintained for reasons of record.
3. Applicant's arguments filed March 1, 2004 have been fully considered but they are not persuasive.

The examiner has carefully considered applicant's request for reconsideration and arguments for withdrawal of the obviousness- type double patenting rejections.

However, claims 1-28 remain rejected as unpatentable over claims 1-28 of US Patent No. 5,164,796 because both inventions use semi-permeable membranes or compositions. Also, the examiner agrees with applicant's statement that "[The membrane or composition only permits the passage of gas molecules.]" which clearly implies "filter" means are operational in the invention claimed in US Patent 5,164,796. The instant invention claims filter means. In addition, gas molecules are or may be filtered from liquid or solid state compositions claimed in both inventions. Thus, there is substantial overlap of the subject matter claimed in both inventions.

Secondly claims 1-21 remain rejected as unpatentable over claims 1-21 of US Patent No. 5,094,955 because both inventions use semi-permeable membranes or compositions. The examiner agrees with applicant's statement that "[The membrane or composition only permits the passage of gas molecules.]" which clearly implies "filter" means are operational in the invention claimed in US Patent 5,164,796. It is noted that

the instant invention claims filter means. In addition, gas molecules are or may be filtered from liquid or solid state compositions claimed in both inventions. Thus, there is substantial overlap of the subject matter claimed in both inventions.

Likewise, claims 22-28 remain rejected as unpatentable over claims 1-21 of US Patent No. 5,217,876 because both inventions use semi-permeable membranes or compositions. The examiner agrees with applicant's statement that "[The membrane or composition only permits the passage of gas molecules.]" which clearly implies "filter" means are operational in the invention claimed in US Patent 5,164,796. It is noted that the instant invention claims filter means. In addition, gas molecules are or may be filtered from liquid or solid state compositions claimed in both inventions. Thus, there is substantial overlap of the subject matter claimed in both inventions.

Further, the examiner notes for the record that the nonstatutory double patenting statute does not require instant claims 1-28 to be identical to the claims in US Patents 5,164,796; 5,094,955 nor 5,217,876. There is substantial overlap of the subject matter claimed in each invention for reasons described above. Thus, the nonstatutory double patenting rejections have been maintained because the subject matter claimed in the inventions are not patentably distinct.

**4. THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
